

Optimize the cash flow of your car dealership

Uncover hidden stock with regular inventory checks

20 % unrecorded vehicles

On average, 20% of vehicles are newly recorded* during each inventory check. This means they were not previously recorded in the inventory.

On average, **50 %** of these vehicles* are designated for sale and thus represent “idle capital” for the car dealer.

Average vehicle price*:

37 420 €

Hidden inventory reduces cash flow.

Holding costs and idle capital

With an average holding period of 102,5 days* and associated costs of 30 € per day*, the total holding costs amount to 3075 € per vehicle.

3075 €
per vehicle

Calculation example:

1 car dealer has 5000 vehicles
20% of 5000 = 1000 vehicles
50% of that = 500 vehicles

500 vehicles × 3075 € =

1 537 500 €

Regular inventory checks uncover hidden stock

More frequent inventory checks help car dealers control costs more effectively and improve cash flow.

Costs of idle capital %

More frequent inventory recording = significantly lower holding costs.

1 x Inventory	100 %
2 x Savings	50 %
3 x Savings	33 %
4 x Savings	25 %

Cost relation to no. of inventories

The more inventories,
the lower the costs.
